Examination	University	Institute	Year	CPI/%
Graduation	GTU(AIML)	LDCE Ahmedabad	2022-26	7.56
HSC	GSHEB	G.G. Zadafiya Vidhyalaya	2022	82
SSC	GSEB	G.G. Zadafiya Vidhyalaya	2020	84.05

PROJECTS

- **Multi Agent Research Assistant (Link)**
  - Built a multi-agent AI research assistant using LangGraph, RAG (FAISS + Tavily), and Google Gemini with self-correcting retrieval to generate accurate, citation-backed reports.
  - Built **a dual-retrieval data pipeline** integrating the **Tavily Search API** for live web queries and **FAISS** vector Databases for local document Retrieval-Augmented Generation (RAG) also Implemented Corrective RAG framework To reduce LLM hallucinations and improve final response accuracy.
  - Developed an **interactive Streamlit-based UI** with real-time execution streaming, enabling transparent multi-agent workflow visualization.
- **Pneumonia Detection using CNN (Link)**
  - Developed a Convolutional Neural Network (CNN) to automatically detect pneumonia from chest X-ray images.
  - Trained the model on a large labeled dataset, enabling it to distinguish between normal and pneumonia lung.
  - Achieved a test accuracy of ~92%, demonstrating strong potential for real-world clinical diagnostic support.
- **E-commerce Product Recommendation Chatbot using Generative AI (RAG Framework)**
  - Built an intelligent recommendation system that assists users in finding electronics products based on preferences like price, rating, and durability.
  - Integrated **Retrieval-Augmented Generation (RAG)** architecture using **LangChain**, FAISS, and Hugging Face Transformers (DistilGPT-2).
  - Processed and analyzed the **Amazon Electronics Reviews dataset** (Kaggle) — extracted key insights, embedded reviews using **SentenceTransformers**, and created a **vector database** for semantic search.

TECHNICAL SKILLS

- **Programming & Data Logic:** Python, SQL, REST APIs, Webhooks, JSON Data Parsing.
- **AI Orchestration & Automation:** n8n, LangChain, RAG Architecture, LLM, Workflow Architecture, Agentic AI.
- **Machine Learning & Cloud:** Scikit-learn, TensorFlow, Hugging Face, NLTK, OpenCV, Azure ML, MLflow, Power BI, Docker
- **LLMs & Vector Databases:** Gemini, Grok, OpenAI Codex, Pinecone, Chroma, FAISS, Google Embedding Models
- **Web Scraping & Rapid UI:** BeautifulSoup, Streamlit, FastAPI.

WORK EXPERIENCE & INTERNSHIPS

- **AI – ML Intern at Ascendance Solutions** (Jan'26 - Present)
  - Developed and deployed **ML and GenAI solutions** using Python, improving task automation efficiency by **30–40%**.
  - Gained **hands-on experience in Artificial Intelligence and Machine Learning**, working on real-world problems and practical implementations.
  - Designed an end-to-end automated supply chain monitoring workflow using n8n that detects delayed shipments, triggers a Gemini AI agent (ARIA) to analyze root causes, evaluate alternative routes, and auto-generates reports.
- **Microsoft Summer Internship Program – Data & Ai + Azure Cloud** (July'25)
  - Completed 60 hours of hands-on training under Microsoft & GTU initiative. Gained practical skills in Azure AI, Natural Language Processing, Generative AI on Azure ML, and Power BI.
  - Built NLP and Deployed solutions and dashboards using Azure ML, Power BI, and Cognitive Services.

AREA OF INTEREST

- Agentic AI, GenAI
- Workflow Automation
- MLOps

HOBBY

- Chess & Sudoku
- Traveling
- Exploring AI Trends and Technology
